Sonar Qube :

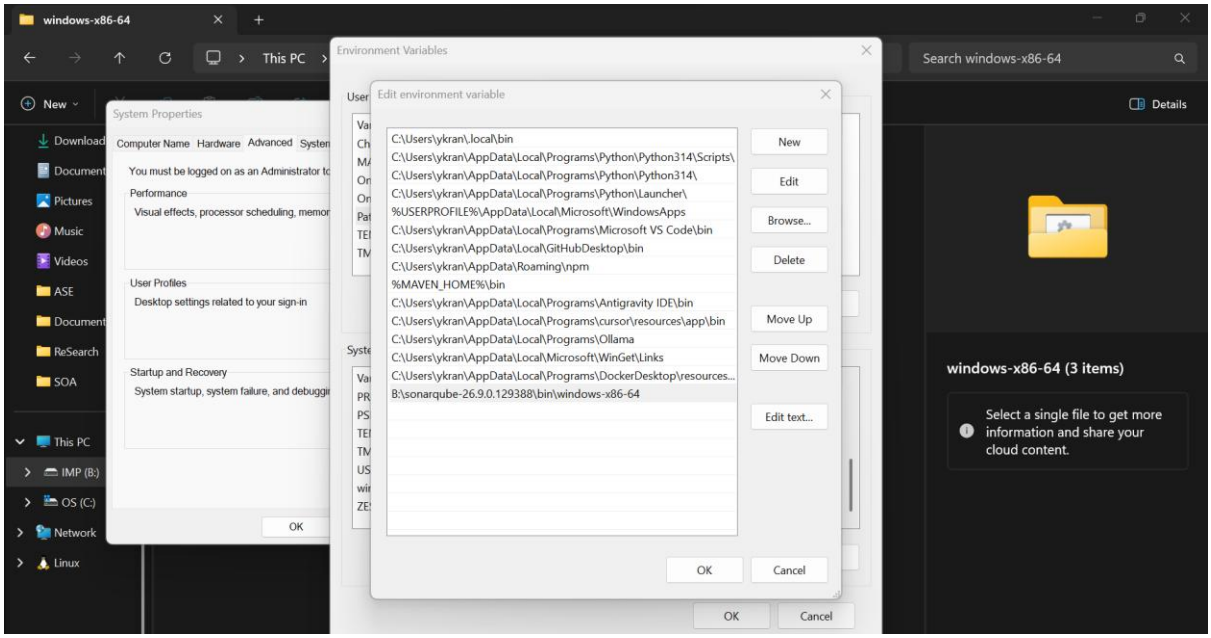

To perform static code analysis on a simple java program using sonarqube and identify code quality issues such as bugs, code smells, and maintainability

Step 1: Install SonarQube and SonarScanner
https://www.sonarsource.com/products/sonarqube/downloads/

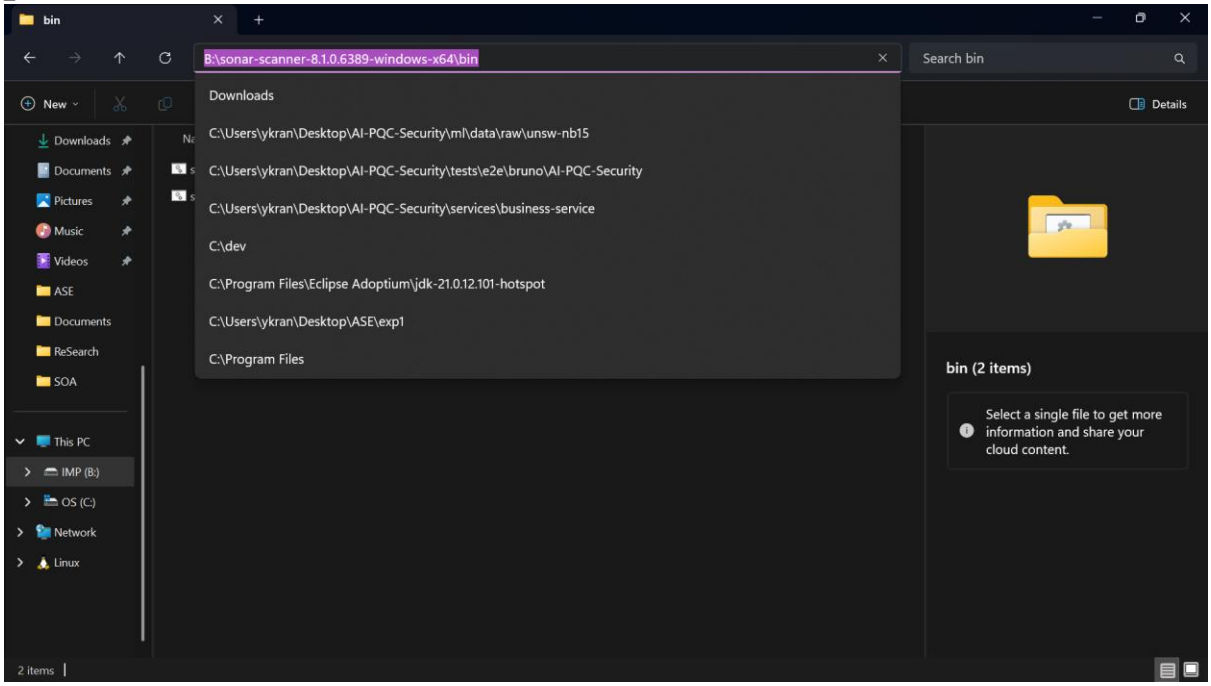

Step 2: Goto C Drive-> Open the SonarQube Folder->Open the bin Folder->Open windows-> Choose the OS-> Open

Windows Folder

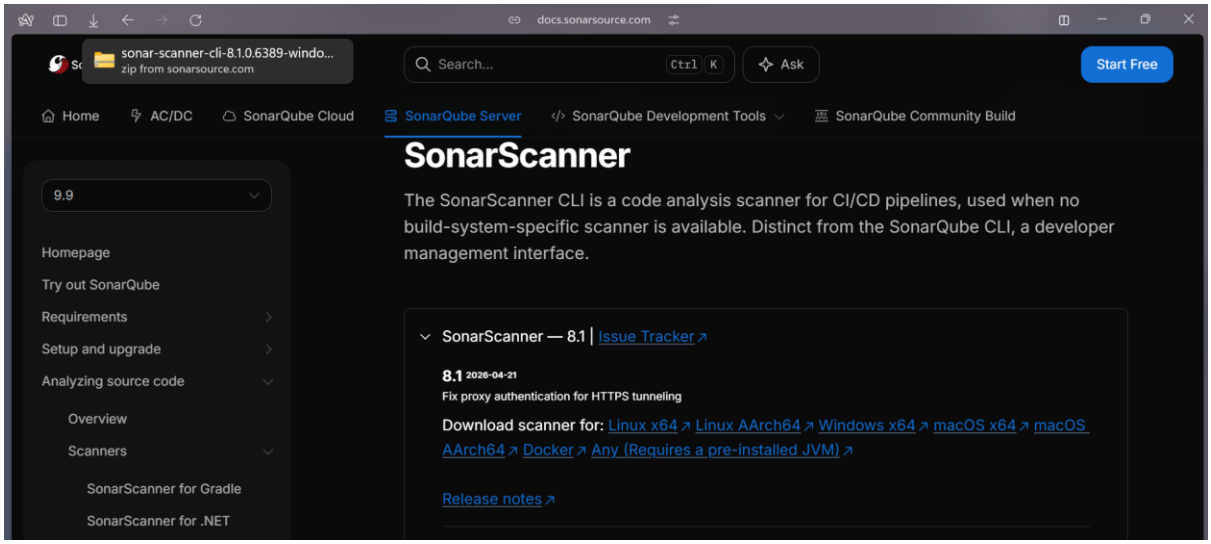

Step 3: Goto windows open the Edit system Environmental Variables-> select the path -> Edit-> click on New-> Paste the path -> click on Ok , Ok and Ok

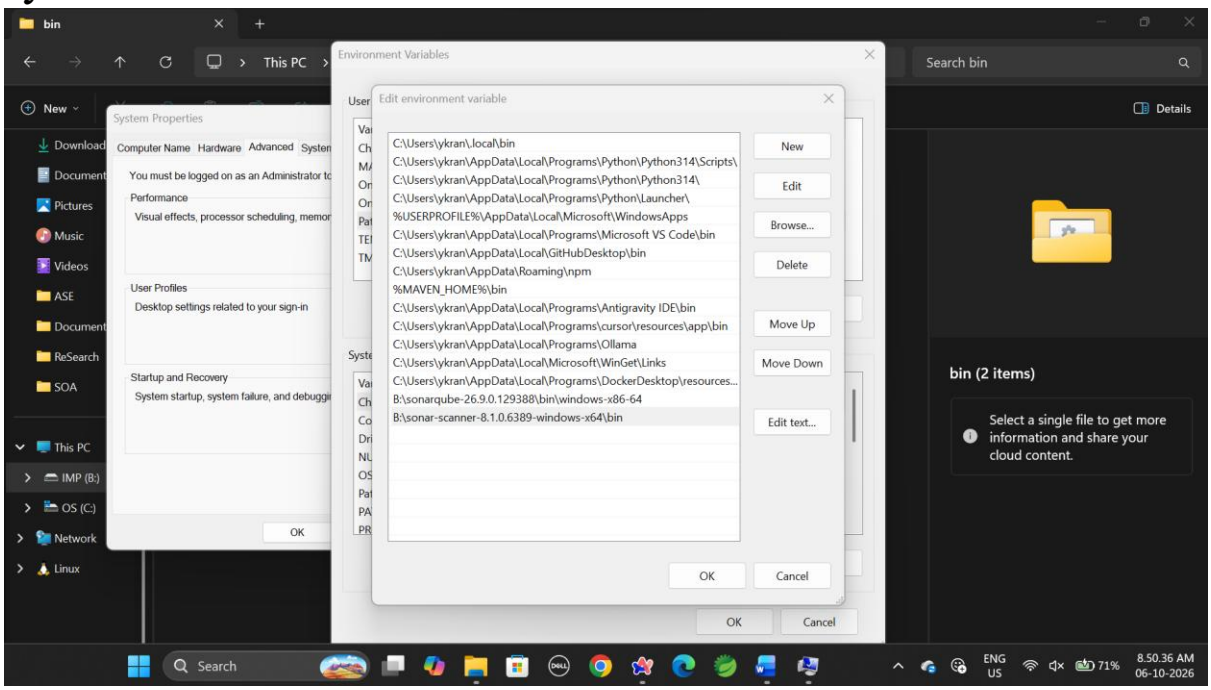

Step 4 : Install SonarScanner

https://docs.sonarsource.com/sonarqube-server/9.9/analyzing-source-code/scanners/sonarscanner

Click on SonarScanner – 8.1 | Issue Tracker

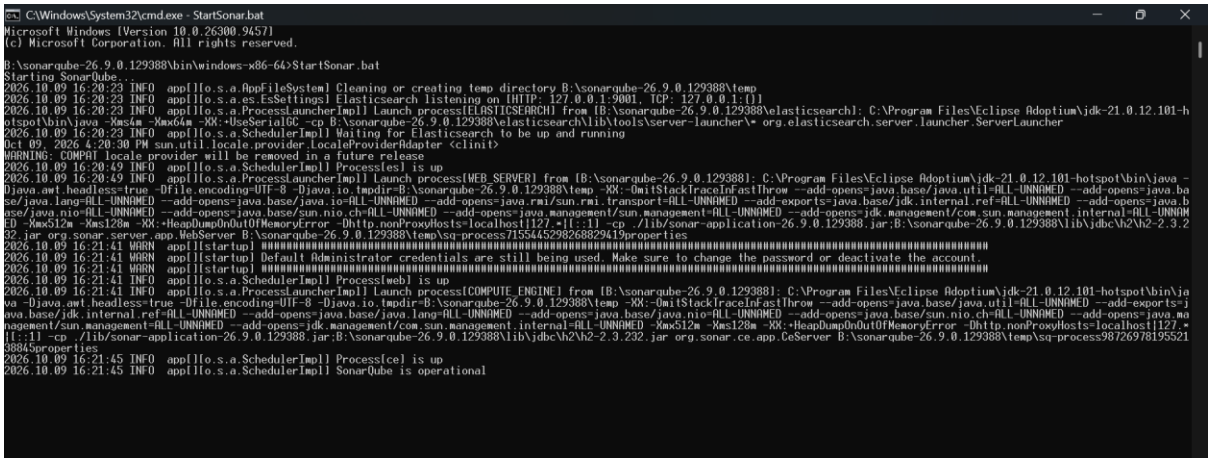

Step5 : Goto C Drive-> Open the sonar-scanner Folder-> Open the bin Folder-> Copy the Path and add the path to system environmental Variables

Step6 : Open the cmd type the command **“StartSonar”**

we should get Process[ce] is up

SonarQube is operational

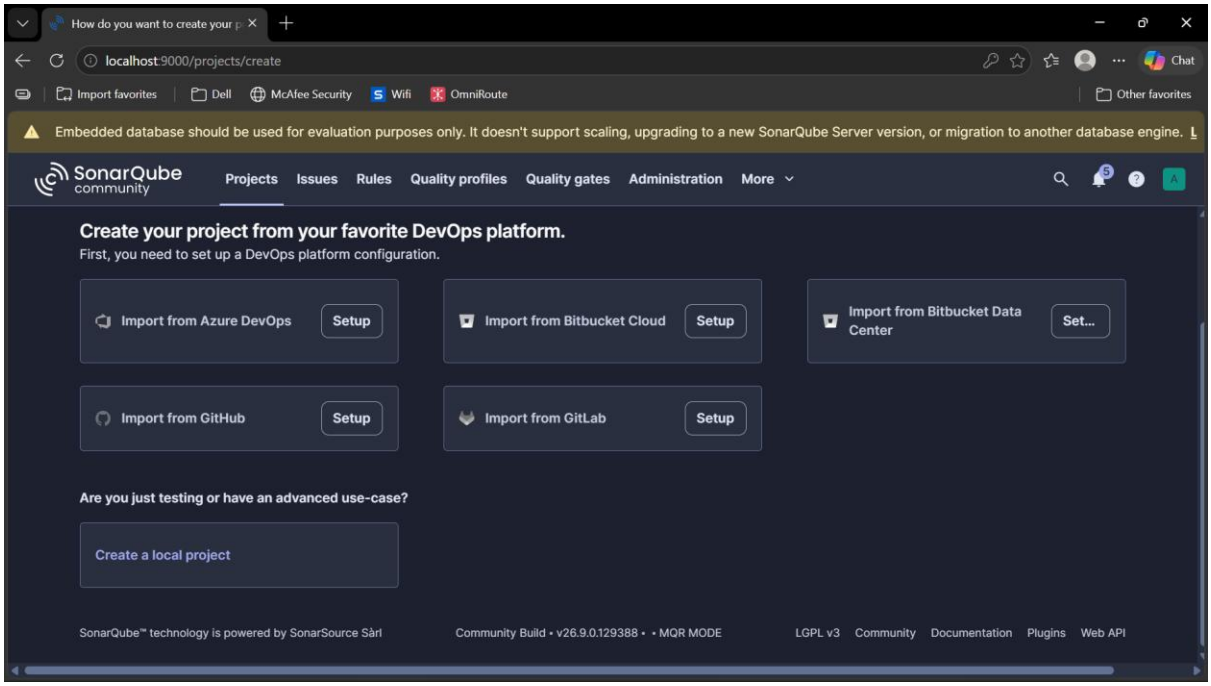

we should not close the command prompt of the SonarQube. We have to minimize. Because it will **ShutDown**

Step7: Open the browser and type

localhost:9000 and press enter

Username and Password -> “admin”

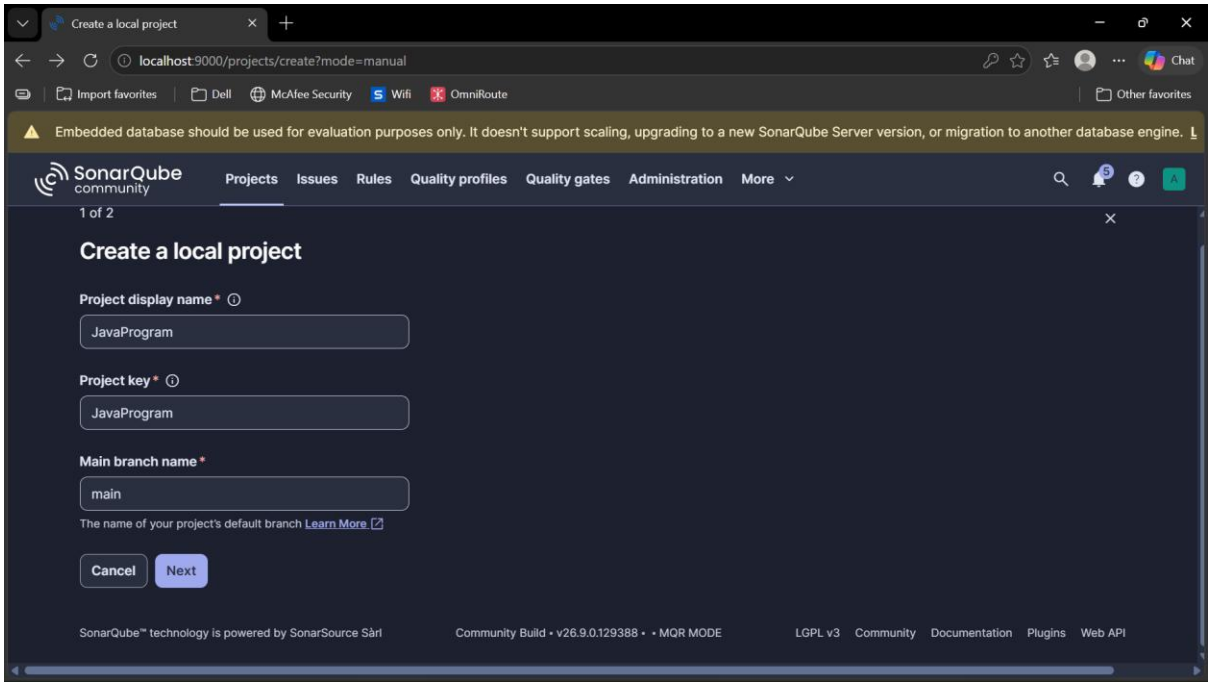

Step8: After entering

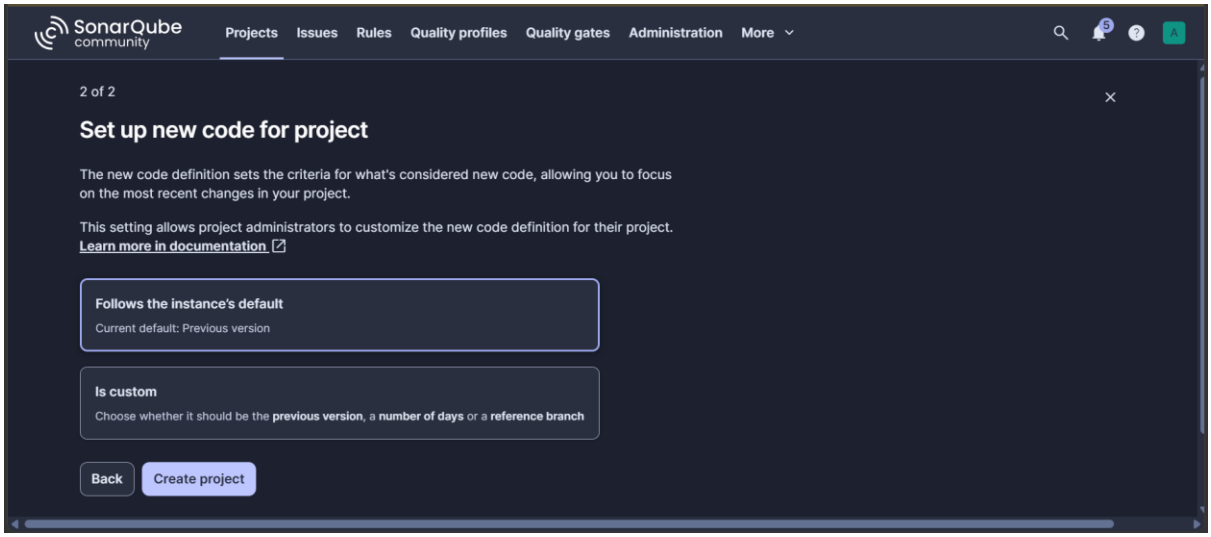

Click on create a Local Project

Step9: Enter the project Name and click on Next

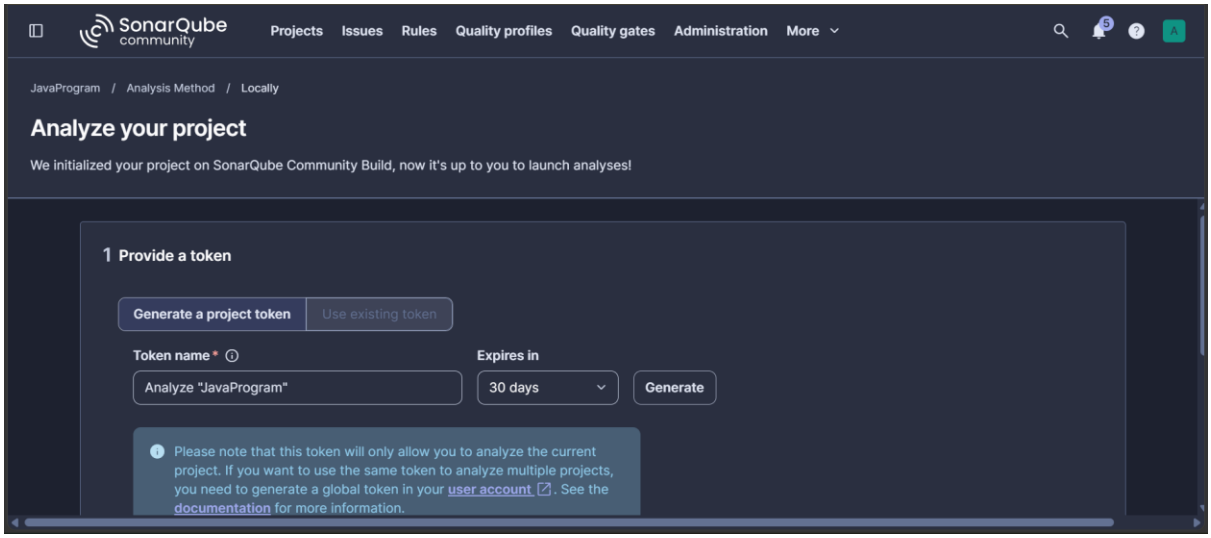

After enter Project Name and Project Key

after clicking next we will get
“Follows the Instances default” Click on create Project

Choose “Locally”
Click on “Generate”

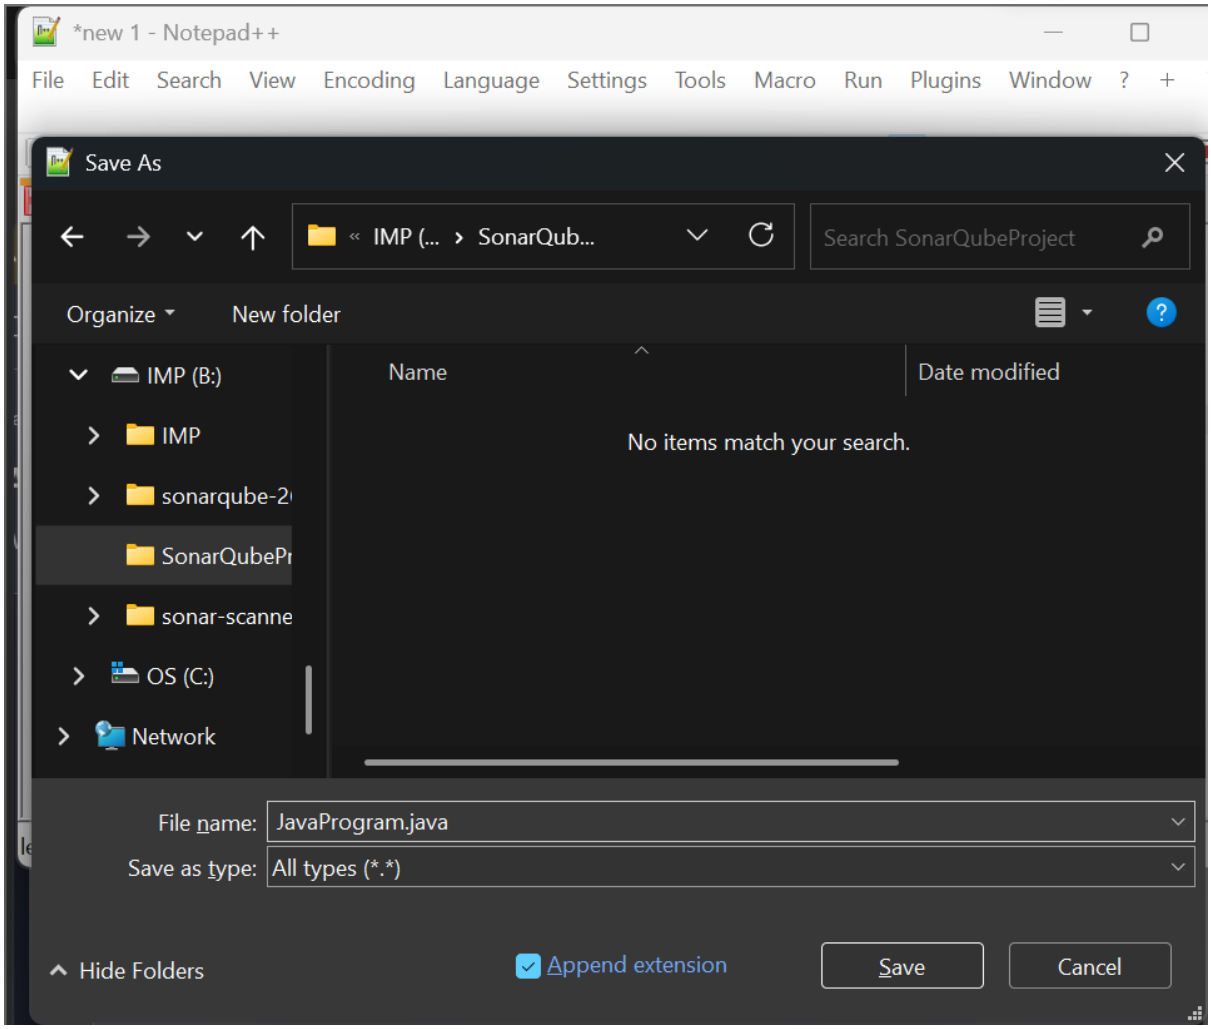

then we will get a “TOKEN”
Copy that token and paste it anywhere

Step 10: Open new cmd as in the previous cmd is in Operational of SonarCube

Enter -> sonar-scanner -v

Step 11: Configuration File Should be named as “JavaProgram”

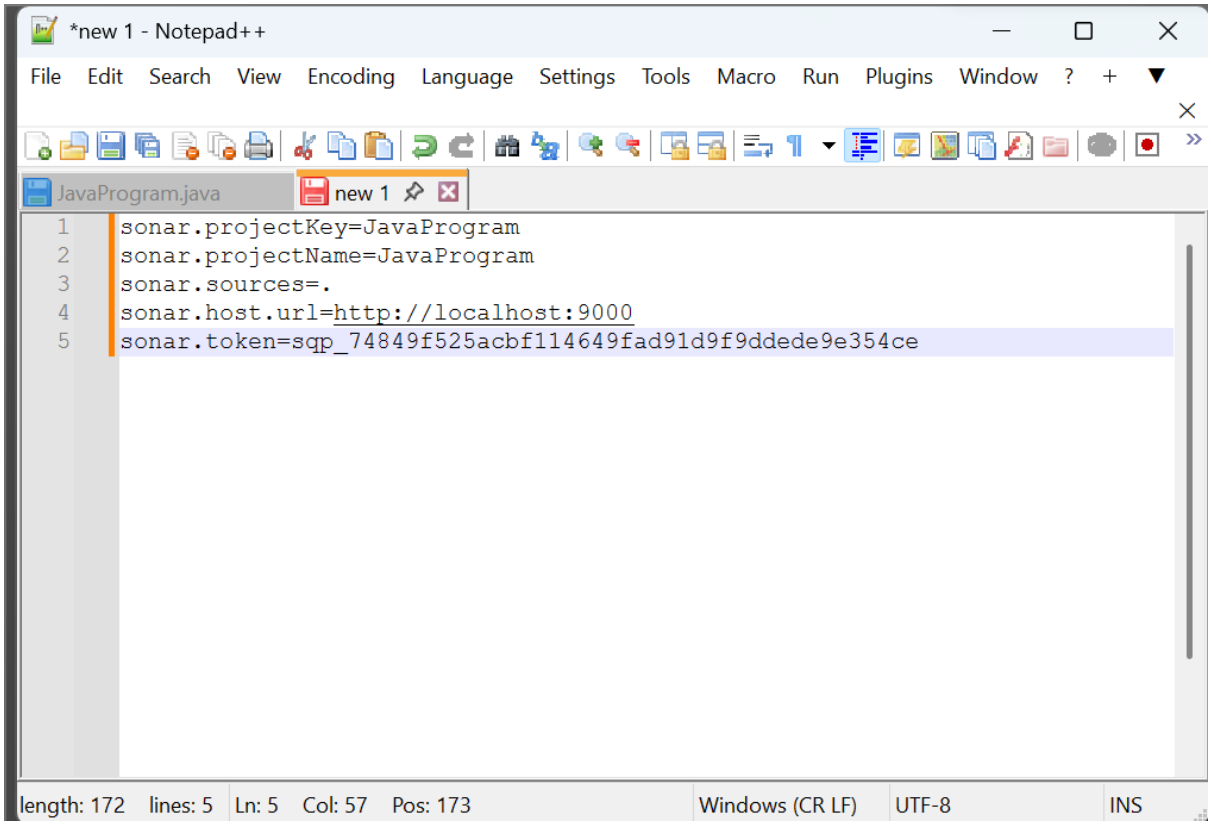

Step 12: compile the JavaProgram to get the class file

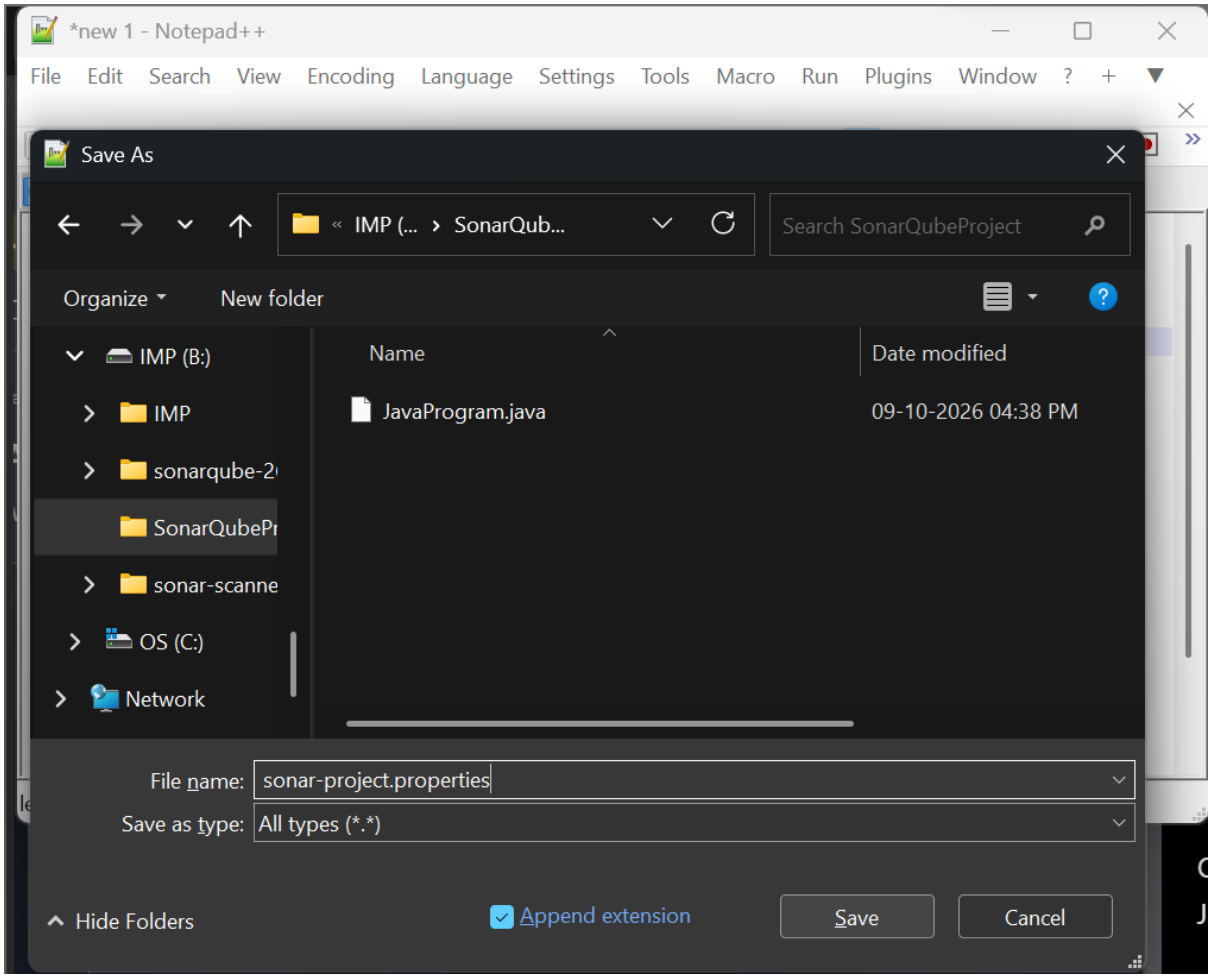

copy the path where java program is saved

Change the directory where the program is there

goto cmd and change the path

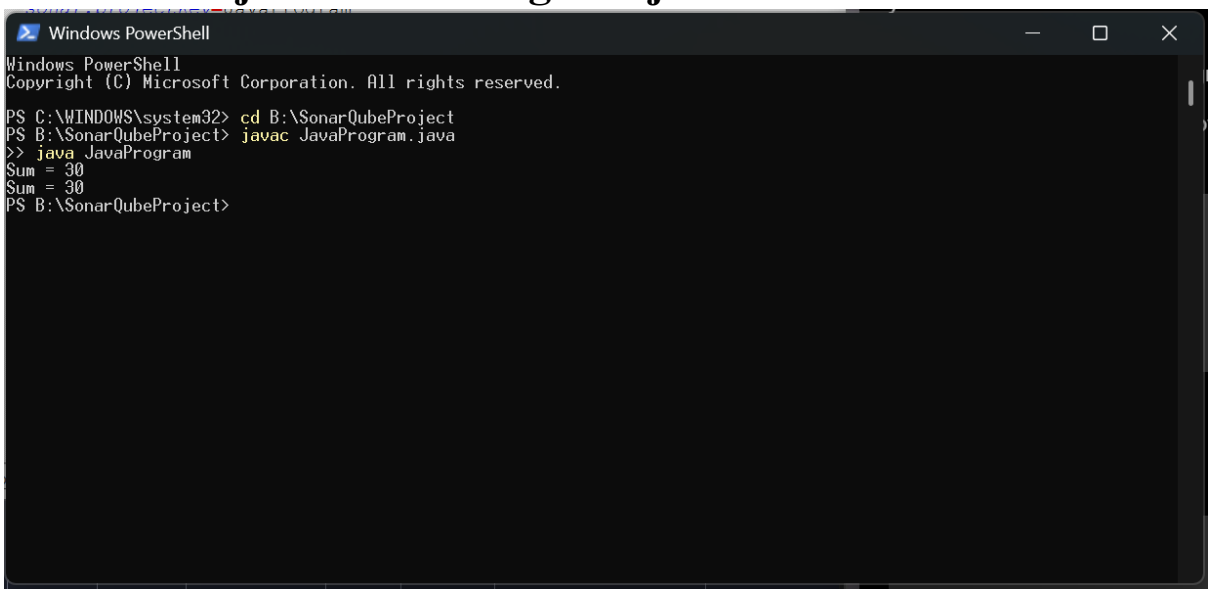

cd **C:/SonarQube**

*new 1 - Notepad++
File Edit Search View Encoding Language Settings Tools Macro Run Plugins Window ? + ▼
JavaProgram.java
new 1
1 sonar.projectKey=JavaProgram
2 sonar.projectName=JavaProgram
3 sonar.sources=.
4 sonar.host.url=http://localhost:9000
5 sonar.token=sqp_74849f525acbf114649fad91d9f9ddede9e354ce
length: 172 lines: 5 Ln: 5 Col: 57 Pos: 173
Windows (CR LF) UTF-8 INS

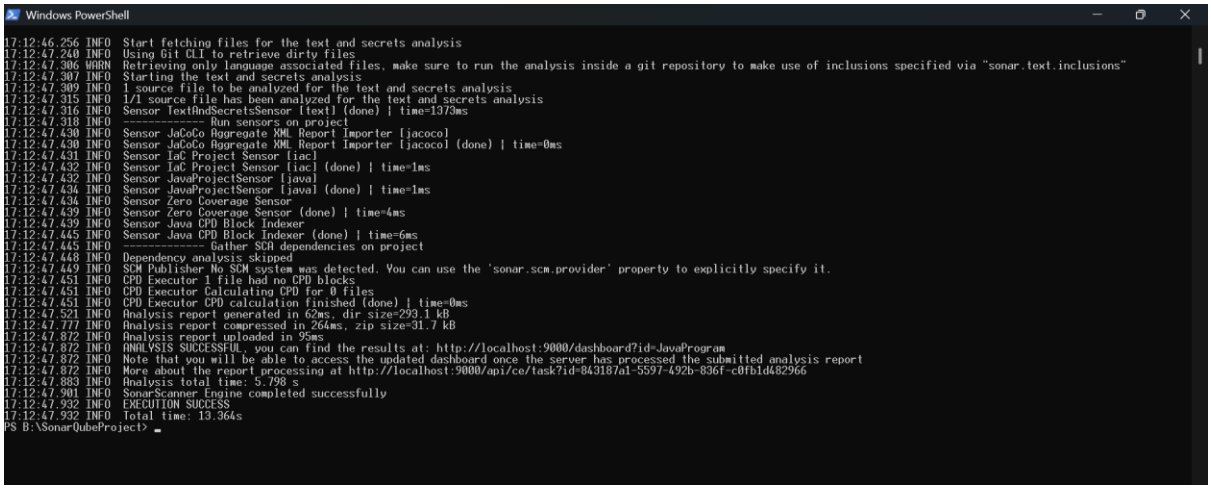

Step 13: compile the program in the cmd

C:\javac JavaProgram.java

Step 14: Scan the program cmd-> sonar-scanner

Once the scanning has done you will get as “EXECUTION SUCCESS”

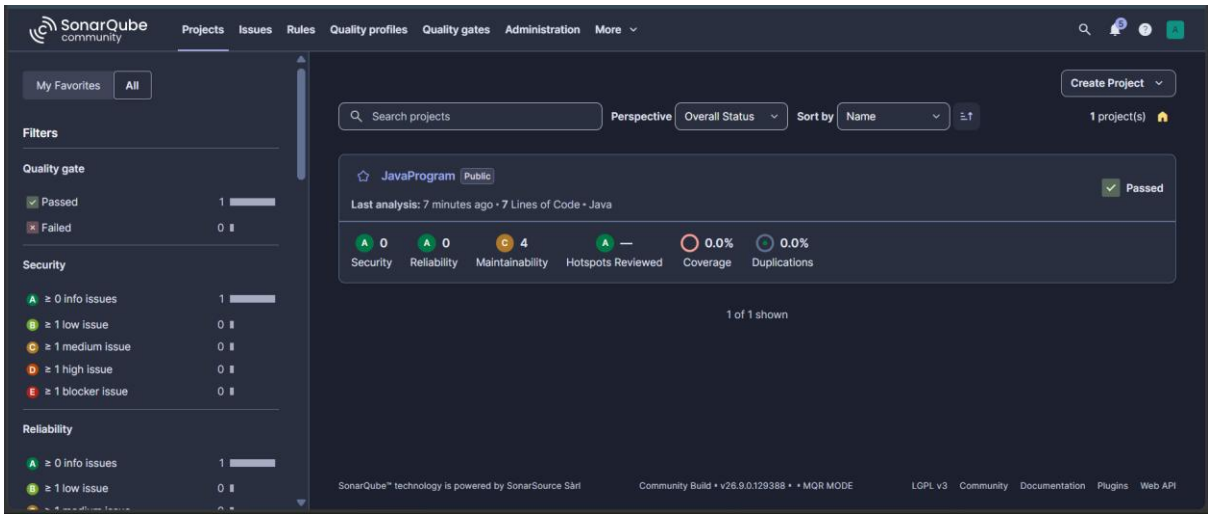

Now goto the Server Report will generate

Open the SonarQube Browser

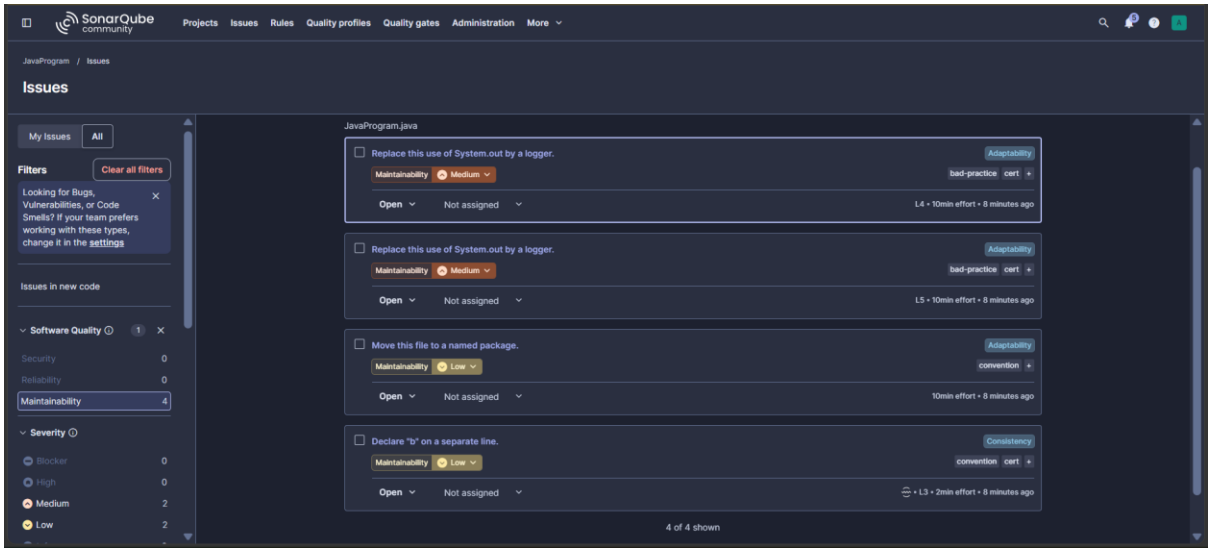

<u>Step 15:</u> Click on Projects on top and check the report

Here 5 Maintainability is showing check those click on issues it will give all issues

Server is in Operational, once the work is done stop the server

Open the cmd where the server is in operational

Press **ctrl+c**

Type exit and y

To Check the server is stopped, open the web browser of SonarQube and refresh.
